# Getting Started

With the Pages API people can update and manage Facebook Pages from your page-related app. People can publish content to Facebook or Messenger with a Page's identity. Use cases for Pages API include:

- Building a Pages management tool for customers or for your company
- Building apps so content creators and editors can easily publish as a Page
- Marketing and advertising for a business using the Marketing API. For more information, see [Ads Management API](#) and [Unpublished Page Posts](#)

## App Review

The Pages API requires [App Review](#). Request approval for the following features and permissions.

### Features

- [Page Mentioning](#)
- [Page Public Content Access](#)

Note that [Page Public Content Access](#) is only necessary if your app needs to access public data on Pages for which it lacks the [manage\\_page](#) login permission.

### Permissions

- [manage\\_pages](#)
- [pages\\_manage\\_instant\\_articles](#)
- [pages\\_show\\_list](#)
- [publish\\_pages](#)
- [read\\_insights](#)
- [read\\_page\\_mailboxes](#)

You may need to request approval for additional permissions, depending on the Graph API endpoints you will be using. The reference documents for Page-related nodes and edges list all required permissions.

## Business Verification

In addition to general App Review, you will be asked to complete [Business Verification](#).

## Implementation Steps

1. [Create a Page](#)
2. [Developer Account](#)
3. [Create a Facebook App](#)
4. [Select your Tools](#)
5. [Ask for Permissions](#)
6. [Get a Page Access Token](#)
7. [Post as a Page](#)

### 1. Create a Page

Use an existing page or create a new one.

#### Using the UI

For full instructions, see [Help Center, How do I create a Page?](#)

#### Using the API

Use the [/user/accounts](#) edge to create a Facebook Page.

#### Requirements

- Your app must be whitelisted to use the Pages API. (You can apply through your Facebook representative.)
- A User access token with [manage\\_pages](#) permissions.
- The [category\\_enum](#) parameter with a [Page Category](#).

- Other requirements vary depending on the type of page you are creating but may include `name`, `about`, `picture`, and `cover_photo`.

### Sample Request

Android SDK   IOS SDK   Java SDK   PHP SDK   cURL

```
GraphRequest request = GraphRequest.newPostRequest(
    accessToken,
    "/your-user-id/accounts",
    new JSONObject("{\"name\":\"Maggie's Test Blog\",
        \"category_enum\":\"PERSONAL_BLOG\",
        \"about\":\"Just trying the API\",
        \"picture\":\"https://your-picture.com/pic.jpg\",
        \"cover_photo\":{\"url\":\"https://your-cover-picture.com/pic.jp
        \"}"),
    new GraphRequest.Callback() {
        @Override
        public void onCompleted(GraphResponse response) {
            // Insert your code here
        }
    });
request.executeAsync();
```

### Sample Response

```
{
  "id": "your-new-page-id"
}
```

Use the `page_id` returned in the response to visit the page.

```
https://www.facebook.com/your-page-id
```

## 2. Developer Account

If you don't have a Facebook developer account, you will need to create one. A Facebook developer account will give you access to our developer tools and allow you to create Facebook apps.

Create Developer Account

### 3. Create a Facebook App

This step creates an App ID which is used when making API calls and allows you to add products, such as webhooks and analytics, to your app. Access to the Marketing API requires you create a Facebook App ID.

Create a New App

### 4. Select Your Tools

Choose one of the following tools:

**Graph API Explorer** - Test Pages API using the [Graph API Explorer tool](#). Learn more about [using the Graph API Explorer](#) and the [Graph API](#).

**Facebook SDKs** - If you want to go beyond testing select one or more of our SDKs. Our SDKs give you easy access to the [Graph API](#) as well as [Facebook Login](#) which you will need to [get access tokens](#).

SDK for Android

SDK for iOS

SDK for JavaScript

SDK for PHP

### 5. Ask for Permissions

Your app needs to ask for permissions to manage a page or post as a page.

Be sure to know the [limitations](#) of access of apps in [Development Mode](#) versus [Live Apps](#).

In the [Graph API Explorer](#) or via using one of our SDKs ask for the following permissions:

- **manage\_pages** - Enables your app to retrieve Page Access Tokens for the Pages and Apps that the person administrates.
- **publish\_pages** - Gives your app the ability to post, comment, and like as any of the Pages managed by a person using your app.

Tip: In the Graph API Explorer select permissions by clicking **Get Token**, then **Get User Access Token**.

Screenshot: Get User Access Token

Screenshot: Select Permissions

### Advanced Permissions

In this getting started guide we will only use the basic permissions `manage_pages` and `publish_pages`. To learn more about the advanced permissions `read_page_mailboxes`, `pages_show_list`, and `pages_manage_cta` read our [Page Access Tokens & Permissions guide](#).

## 6. Get a Page Access Token

Now that you have a User Access Token with the needed permissions, you can get a Page Access Token. Make an API request using your user access token and your Facebook Page ID.

```
GET https://graph.facebook.com/your-page-id?fields=access_token&access_token=you
```

The response will look like this:

```
{
  "access_token": "CAACEdEose0cBACCZBZA5qz1ZBjUX...",
  "id": "your-page-id"
}
```

The `access_token` field in the sample response contains the Page Access Token for the requested page. Use it to manage the Page, post as a Page, and so forth. Learn more about [Page Access Tokens and Permissions](#).

## 7. Post as a Page

Now you can make a post as the Page. Send a `POST` request to the `/[page-id]/feed` endpoint using the `message` field to define your message text. You can do this using the [Graph API Explorer](#) to test and to show you the code you can use.

Graph API Explorer Request and Response - The `id` returned is the `message_id`.

The screenshot shows the Graph API Explorer interface. At the top, it says 'Graph API Explorer' and 'Application: [?] Graph API Explorer'. Below that, the 'Access Token' field contains a long token, and the 'Page' dropdown is set to 'Ash Cat Page'. The request is a POST to the endpoint `/v2.10/1353269864728879/feed?message=Hello World!`. The response is a JSON object: `{ "id": "1353269864728879_1475371139185417" }`. There are buttons for 'Add a Field', 'Profiling', and 'Submit'.

To get a list of `page_ids` in the Graph API Explorer send a **GET** request to `me?fields=id,name,accounts` where `me` is you with your User Access Token. This will return a list of pages you manage.

**Graph API Explorer** Application: [?] **Graph API Explorer** ▼

Access Token: EAACEdEose0cBAHpZBff2Dg5ykSr3Pi7xE0p8t7DdmXTZB6xyl7eZCCmKqru4LLzLbhKQm7zWV5CY7h5XoDU6rZCHkwZCbKuE0FW7FZA Get Token ▼

GET → v2.10 / `me?fields=id,name,accounts` ★ Profiling ▼ Submit

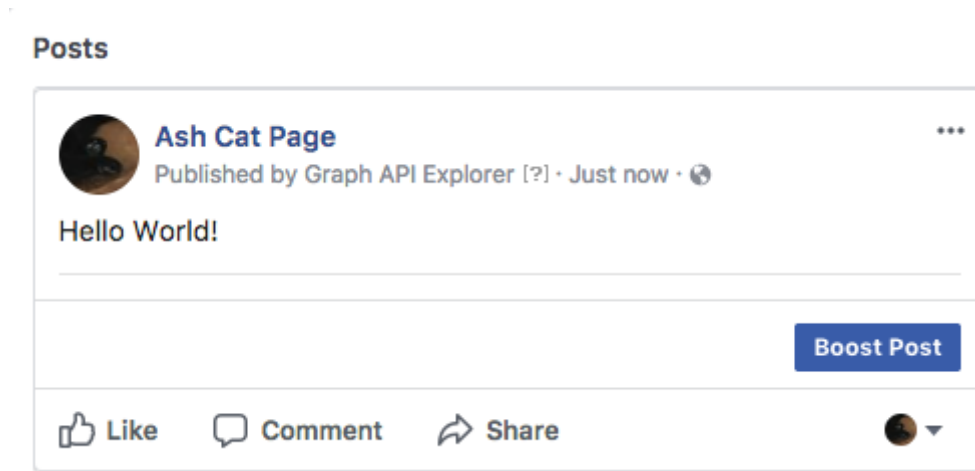

Learn more about the Graph API syntax

Node: me

- ☒ id
- ☒ name
- ☒ accounts

```
{
  "access_token": "EAACEdEose0cBACa1D1HZA12H5Dzz8I14Lin2UqGW6xbKH0exx3RZay45MKu3PWwiQFKFUUmXjJdewbVdyDqEBsw78v",
  "category": "App Page",
  "name": "Ash Cat Page",
  "id": "1353269864728879",
  "perms": [
    "ADMINISTER",
    "EDIT_PAGE_SETTING"
  ]
}
```

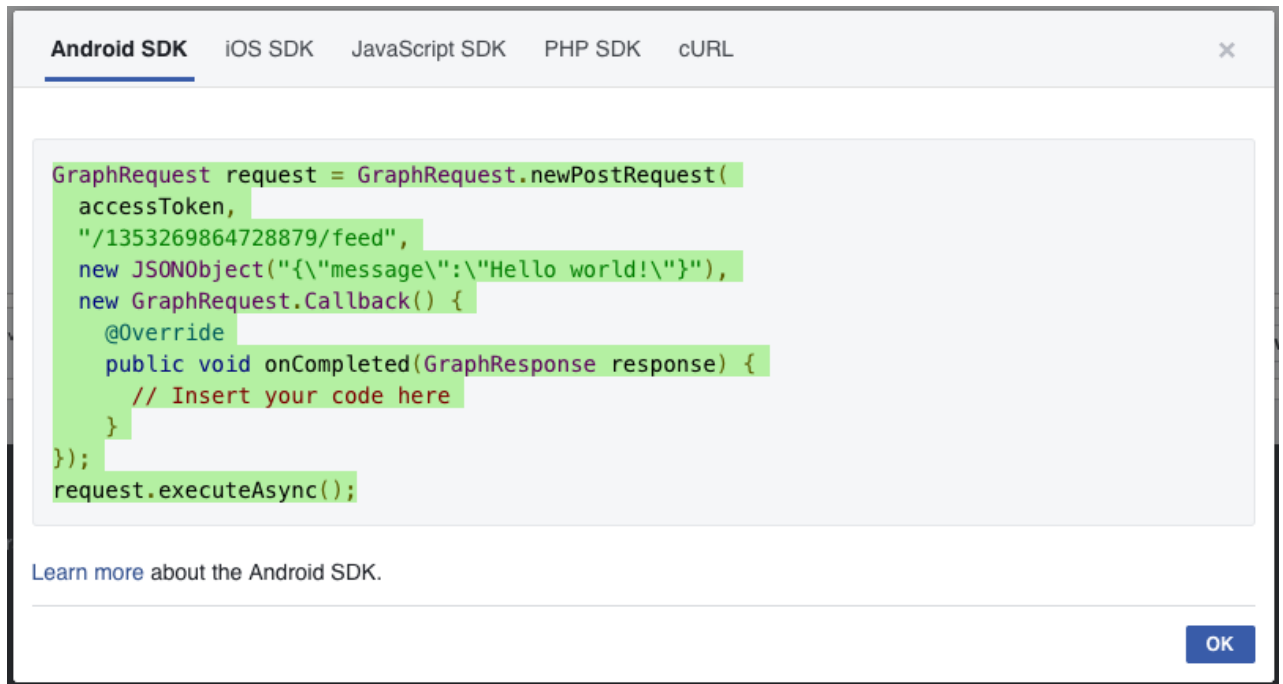

## The Result in Your Page Feed

Getting the Code Snippet - At the bottom of the Graph API Explorer you can get the code for this, or any, request.

**Copy Debug Information** **Get Code** **Save Session**

The Code Snippet - Select Android, iOS, JavaScript, PHP, or cURL.

You can also verify that your post was published by sending a **GET** request to the **/page-id/feed** endpoint.

## Limitations

To access public data of Pages, such as page posts, page comments, etc., your app must go through [App Review](#). You can test by querying your own pages' public data while your app is in [Development Mode](#).

Apps in [Development Mode](#) can only access the User node of users who have one of the following [App Developer Roles](#): An admin, a developer, or a tester.

Calls to the API are subject to [rate limiting](#). Please view our [Graph API Rate Limiting Guide](#) for more information.
